

zb Zentralbahn Maintenance Efficiency Analysis

The potential to enhance the efficiency lies within the own staff. PROSE Ltd. provides the necessary impetus that enables them to exploit their own potential in order to meet new challenges.

Customer Requirements

Effective reduction of the maintenance costs, while at the same time enhancing the quality of the maintenance works.

The following sub-goals have to be realized:

- Cost optimization of the maintenance works
- Implementation of lean maintenance processes in compliance with the existing ERP-solution
- Implementation of professional logistics
- Enabling the staff to enhance the processes continually.

Car maintenance 100 years ago.

Realisation

Six task groups work on the realization of the sub-goals under the lead of PROSE Ltd. A report is compiled listing the established criteria in combination with recommendations regarding the possibilities to enhance the efficiency as well as giving a cost estimate and stating the priorities.

Customer Advantages

The projectmanagers of ENOTRAC and PROSE are specialists in the rail sector. The potential of zb's own staff is exploited optimally. Due to the intensive teamwork, management and staff find a common approach, while being motivated and encouraged to go for the positive change. The measures for the optimization of the maintenance, compiled in such a way in the team, can be converted purposefully in small, visible projects.

Factsheet 9.00039a

Detailed Information

Information on the Project

- Customer / Carrier: zb Zentralbahn Ltd.
- Analysis: May to September 2008
- Implementation: from spring 2009
The measures decided upon will be realized within a separate project independent of the analysis.

Scope of Analysis

- Processes and main responsibilities
- Diagnose, planning and preparation
- Interface to fleet management
- Procurement
- Logistics
- Maintenance procedures
- Shop infrastructure, tools and equipment
- Personnel
- Management, controlling and communication
